

COVER⁺

COVER⁺

economical

- reduces heating-costs with 80%
- less evaporation
- limits the water and chemical consumption to 60%
- less costs of
 - air-conditioning and dehumidification
 - maintenance and cleaning costs, fewer leaves, branches, pollution...
 - filtration costs
- reduces the amount of algae in the water
- the large patented anti-algae profile offers better isolation with increased solar gain

safe

- in combination with SS handrails or a specially constructed shelf below and a lock at the front there is safety against drowning
- electrocution is impossible: low voltage (24V)
- the opening and closing mechanism is quiet and efficient and can only be worked when the special key is in the correct position
- the large 83mm width profiles have an improved weight carrying capacity
- the special safety hinge offers more buoyancy compared to the classic hinge

comfortable

- automatic operation of the cover
- remote control
- selfcleaning
- no odour of chemical products
- working remotely with key or remote control
- aesthetical
- better hibernation and less dirt by stormy weather
- works soundless
- maintains the water temperature, especially at night with the use of solar profiles, the pool gets heated
- extends the swimming season

execution

- venetian shutter made of PVC or Polycarbonate profiles with closed chambers
- different width of profiles (50 or 60 or 83mm) and thicknesses (11 to 16mm) available
- 2 types of hinges: the classic hinge or the safety anti-algae hinge available in different colours:
 - PVC: white, grey, sky blue, dark blue, beige, green, translucent blue, solar
 - PC: translucent or solar in different executions like totally transparent, blue, green, green, black, silver, yellow, red, ...
- solar profiles are translucent with a black underside to absorb and conduct the solar heat and to reduce the amount of algae
- suitable for new or existing pools
- above or below ground
- different installation options (custom design)
- adaptable to different shapes of swimming-pool
